$\qquad$
Examples

| Quadratic term Linear term 1 <br> $\mathrm{X}^{2}$ +4 X | Linear term 2 <br> constant $+2 x \quad+8$ |
| :---: | :---: |
| Factored form of the first two terms $x(x+4)$ <br> IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses | Factored form of the last two terms $\begin{gathered} +2(x+4) \\ (x+4)(x+2)=x^{2}+4 x+2 x+8 \\ =x^{2}+6 x+8 \end{gathered}$ |
| Quadratic term Linear term 1 <br> $x^{2}$ $+5 x$ | $\begin{array}{rr} \text { Linear term 2 } & \text { constant } \\ +2 x & +8 \end{array}$ |
| Factored form of the first two terms $x(x+5)$ <br> IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses | Factored form of the last two terms $\begin{gathered} +2(x+4) \\ x^{2}+5 x+2 x+8=x^{2}+7 x+8 \end{gathered}$ <br> this is NOT FACTORABLE |
| Quadratic term Linear term 1 <br> $\mathrm{X}^{2}$ -4 X | Linear term 2 <br> constant $+1 x$ $-4$ |
| Factored form of the first two terms $x(x-4)$ <br> IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses | Factored form of the last two terms $\begin{gathered} +1(x-4) \\ (x-4)(x+1)=x^{2}-4 x+1 x-4 \\ =x^{2}-3 x-4 \end{gathered}$ |
| Quadratic term Linear term 1 <br> $x^{2}$ $+2 x$ | Linear term 2 constant $-5 x$ -10 |
| Factored form of the first two terms $x(x+2)$ | Factored form of the last two terms $-5(x+2)$ |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses | $\begin{aligned} (x+2)(x-5) & =x^{2}+2 x-5 x-10 \\ & =x^{2}-3 x-10 \end{aligned}$ |

This method of factoring is called the AC method, we have skipped the "hard" step, we'll get to that step after you can takeit from the second step.

| Quadratic term Linear term 1 <br> $x^{2}$ $+6 x$ | Linear term 2 constant <br> $+3 x$ +18 |
| :---: | :---: |
| Factored form of the first two terms | Factored form of the last two terms |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |
| Quadratic term <br> Linear term 1 $x^{2}$ $+4 x$ | Linear term 2 constant <br> $+6 x$ +24 |
| Factored form of the first two terms | Factored form of the last two terms |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |
| Quadratic term Linear term 1 <br> $x^{2}$ $-6 x$ | Linear term 2 constant <br> $+8 x$ -48 |
| Factored form of the first two terms | Factored form of the last two terms |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |
| Quadratic term Linear term 1 <br> $x^{2}$ $-6 x$ | Linear term 2 constant $-6 x$ $+36$ |
| Factored form of the first two terms | Factored form of the last two terms |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |
| Quadratic term Linear term 1 <br> $\mathrm{X}^{2}$ +3 X | Linear term 2 constant $-3 x$ |
| Factored form of the first two terms | Factored form of the last two terms |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |

$\qquad$ ICP Factoring using the AC Method part 2 11-30-15

If not factorable state so

| $x^{2}-14 x-32$ | List AC $\mathrm{x}^{2}$ | List all of the ways to get AC $\mathrm{x}^{2}$ | List all the ways factors of $A C x^{2}$ can add to Bx |
| :---: | :---: | :---: | :---: |
| Quadratic term | Linear term 1 | Linear term 2 | constant |
| Factored form of the first two terms |  | Factored form of the last two terms |  |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |  |  |
| $x^{2}-13 x+40$ | List AC x ${ }^{2}$ | List all of the ways to get AC $\mathrm{x}^{2}$ | List all the ways factors of $A C x^{2}$ can add to Bx |
| Quadratic term | Linear term 1 | Linear term 2 | constant |
| Factored form of the first two terms |  | Factored form of the last two terms |  |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |  |  |
| $x^{2}+3 x-54$ | List AC x ${ }^{2}$ | List all of the ways to get AC $\mathrm{x}^{2}$ | List all the ways factors of $A C x^{2}$ can add to Bx |
| Quadratic term | Linear term 1 | Linear term 2 | constant |
| Factored form of the first two terms |  | Factored form of the last two terms |  |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |  |  |

| $x^{2}-12 x+35$ | List AC x ${ }^{2}$ | List all of the ways to get AC $\mathrm{x}^{2}$ | List all the ways factors of $\mathrm{AC} \mathrm{x}^{2}$ can add to Bx |
| :---: | :---: | :---: | :---: |
| Quadratic term | Linear term 1 | Linear term 2 | constant |
| Factored form of the first two terms |  | Factored form of the last two terms |  |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |  |  |
| $x^{2}+22 x-48$ | List AC x ${ }^{2}$ | List all of the ways to get AC $\mathrm{x}^{2}$ | List all the ways factors of $A C x^{2}$ can add to Bx |
| Quadratic term | Linear term 1 | Linear term 2 | constant |
| Factored form of the first two terms |  | Factored form of the last two terms |  |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |  |  |
| $x^{2}-20 x+60$ | List AC x ${ }^{2}$ | List all of the ways to get AC $\mathrm{x}^{2}$ | List all the ways factors of $\mathrm{AC} \mathrm{x}^{2}$ can add to Bx |
| Quadratic term | Linear term 1 | Linear term 2 | constant |
| Factored form of the first two terms |  | Factored form of the last two terms |  |
| IF there is a BINOMIAL in common, then factor it OUT Keep all of the rest of the terms in a single parentheses |  |  |  |

| Each of these is factorable Practice! Practice! Practice! |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
